Call for Papers for the 9th International Symposium on Soft Computing for Industry (ISSCI 2012).

The Organizing Committee is pleased to invite you to submit papers to and attend the international World Automation Congress 2012 on ISSCI, that aims to bring together scientists, developers and users of hard- and software applications in which the principles of Soft Computing techniques are involved. By providing a number of themed tracks (both fundamental themes and application areas), the Program Committee has attempted to provide foci for scientific contributions while offering an opportunity to the participants to engage in stimulating discussions with colleagues who may have quite different application frames of reference.

Topics:

We solicit papers on theoretical issues and their applications related to Soft Computing Methods. Suggested topics include but are not limited to Theory and Software/Hardware Implementations of soft-computing techniques such as:

- Neural Nets
- Fuzzy Systems
- Fuzzy-Neural Systems
- Evolutionary Systems
- Swarm Intelligence
- Pattern Recognition
- Genetic Algorithms
- Support Vector Machines

and, in special, Green Energy for a Green Environment.
